

1. $-10 < x \leq 9$ 를 만족하는 정수 x 의 값들을 합을 구하면?

① 9

② 0

③ -8

④ -9

⑤ -10

2. 다음 중 계산 결과가 옳은 것은?

$$\textcircled{1} \quad \left(+\frac{1}{3}\right) - \left(+\frac{5}{12}\right) = -\frac{7}{12}$$

$$\textcircled{2} \quad \left(-\frac{2}{5}\right) - \left(+\frac{2}{15}\right) + \left(-\frac{2}{3}\right) = +\frac{8}{15}$$

$$\textcircled{3} \quad \left(-\frac{9}{10}\right) - \left(-\frac{5}{2}\right) + \frac{3}{5} = -\frac{7}{10}$$

$$\textcircled{4} \quad \left(+\frac{1}{7}\right) - \left(+\frac{3}{14}\right) + \left(+\frac{1}{14}\right) = 0$$

$$\textcircled{5} \quad \left(-\frac{5}{12}\right) - \left(-\frac{10}{3}\right) + \frac{1}{2} = -\frac{5}{12}$$

3. $\left(-\frac{3}{4}\right) - \left(-\frac{2}{3}\right) + \left(-\frac{1}{2}\right) + \left(-\frac{8}{3}\right)$ 을 계산하면?

① $\frac{7}{6}$

② $\frac{5}{6}$

③ $-\frac{7}{6}$

④ $-\frac{5}{6}$

⑤ $-\frac{13}{4}$

4. $-\frac{7}{6}$ 보다 -5 큰 수를 a , 3.2 보다 $-\frac{14}{5}$ 작은 수를 b 라 할 때, $a \times b$ 의 값을 구하여라.

답:
